 LI NL SE)

The sieve elements (2) are mounted side by side and fixed for easy interchange on a support structure by additional plastics sections (6) or bolts. The sections hold the two side edges of adjoining sieve elements.

They have on their underside projections (14) which are fixed by detents on the supporting structure. The sieve elements completely cover the tops of the sections or bolts. Only one single intermediate element such as a bolt or profiled section lies between two sieve elements so that the number of bolts etc. is reduced.

ADVANTAGE - reduced wear of intermediate and support members. (20pp Dwg.No.1/6)
